Overview

- See Dropbox link on http://april2017.mcstas.org and the Friday material
- http://docs.mantidproject.org/nightly/algorithms/LoadMcStas-v1.html

Future: Multiple Scattering

- https://github.com/mantidproject/mantid/issues/11945

- http://media.mcstas.org/ESS_DMSC_20161117/DMSC_talk_MBertelsen_McStas_Union.mp4

Worked examples where best to put?
(in multiple-scattering concept page, in working-with-McStas concept page? … need to include McStas version)
Enough test coverage?
Anything else?

Other

- Take instrument design one step further (is used)
- Pre sample analysis
- Post sample analysis

https://arxiv.org/abs/1607.02498

Mantid -> McStas?

```
<component type="DiskChopper" name="Chopper1”
  <location x="10.6" y=”0.0” z=”0.0” />
  <external-program-specific name=”McStas” version=”2.0”>

    Some code specific to a version of McStas

<external-program-specific/>

</component>
```

Mantid -> McStas?

- User could modify Mantid IDF and run McStas simulations on such

- Where we have monitor data

Anything else where McStas/Mantid might be useful?
